Data Flow Diagrams

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: DFD Level 0 (Industry Standard) - Book Store System

[DFD Level 0 Chart: Customer Orders → Process Order Process → Invoices Data Store & Orders Data Store → Ship Products Process → Fulfillment/User delivery]

System Data Flow Description

1. Customer configures credentials or profiles for the Book Store catalog service and enters the application dashboard.
2. Customer searches the catalog, selects a data file or book record to purchase, process, and load.
3. The Book Store inventory management system validates book availability from the data file backend.
4. Validated order details are passed to the payment gateway and transaction ledger for receipt enrichment.
5. Enriched sales summary data is updated dynamically and visualized in the administrator interface using dashboards.

User Stories

Use the below template to list all the user stories for the Book Store product.

User Type	Functional Req (Epic)	User Story ID	User Story / Task	Acceptance Criteria	Priority	Release
Customer (Mobile/Web user)	Account Registration	USN-1	As a shopper, I can register for a book store account by entering my email, password, and confirming my password.	I can access my new user dashboard safely.	High	Sprint-1
		USN-2	As a shopper, I will receive a registration confirmation email once my account is created.	I can open the email link to verify my account.	High	Sprint-1
		USN-3	As a shopper, I can quickly sign up or register for the book store via my social accounts (Facebook / Gmail).	I can log in automatically via Oauth.	Medium	Sprint-2
	User Login	USN-4	As a returning user, I can log into the book store application by providing my verified email and password password.	I can view my shopping cart and past purchase order history.	High	Sprint-1
Customer (Web user)	Book Catalog & Search	USN-5	As a browser, I can filter books by category, author, price, and genre.	Catalog displays accurate inventory instantly.	High	Sprint-1
Customer Care Executive	Order Support Desk	USN-6	As a support executive, I can search user order histories to resolve purchase disputes or processing errors.	Access to historical logs and refund toggle tool.	Medium	Sprint-2
Administrator	Inventory Management	USN-7	As an store admin, I can update books prices, quantities, and description tables.	Changes reflect instantly across mobile and web interfaces.	High	Sprint-1
